TITLE OF INVENTION: SEQUENCES IN DIAGNOSTIC METHODS AND VACCINES NUMBER OF SEQUENCES: 263
CORRESPONDENCE ADDRESS:
ADDRESSE: ADBRESSE: APRGAN & FINNEGAN
SIREET: 345 PARK AVENUE
CITY: NEW YORK
SIATE: NEW YORK
COUNTRY: USA
ZIP: 10:154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ANCLEOTIDE AND DEDUCED
ANION ACID SEQUENCES OF THE ENVELOPE 1 GENE
OF 51 ISOLATES OF HEPATITIS C AND THE USE
OF REAGENTS DERIVED FROM THESE SEQUENCES IN
DIAGNOSTIC METHODS AND VACCINES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ore 52: DB 4: Length 192; ed. No. 9.20e+01; 5: Mismatches 3: Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 80, Application US/08086428B
PATENT NO. 5514539
GENERAL NO. 5514539
GENERAL BUKH, J., MILLER, R.H. AND
APPLICANT: BUKELL, P.H.
ITLE OF INVENTION: WJCLEOTIDE AND DEDUC
TILE OF INVENTION: AMINO ACID SEQUENCES
ITLE OF INVENTION: OF 51 ISOLATES OF HE
ITLE OF INVENTION: OF 51 ISOLATES OF HE
ITLE OF INVENTION: DIAGNOSTIC METHODS AND MUMBER OF SEQUENCES: 159

Mean 20.556; Variance 54.758; scale 0.375 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NAME: Jane E. Remillard

Mean 27.045; Variance 31.177; scale 0.867 Statistics: Pred. No. is the number of results predicted by whence to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

These peptides (R81580-R81585) were identified as Toell epitopes. These peptides, plus subsequences (R81573-79) essential for Toell recognition, and homologous peptides (R81588-96) can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Periode immunocitierapelic au., to treat allerand diseases to contains milti-epitope periode contains of cell epitope revisors

Tontains milti-epitope periode containing T cell epitope revisors

Solaim 6: Page 31, 58pp. Japanese.

The present sequence represents a multi-epitope peptide which is used as a new immunotherapeutic agent. It comprises T cell epitope revisors from 2 or more different alleragement (presents) insked via arginine or tysine dimers), where the T cell epitope regions have a posit vity index or more different alleraged in a patient group responding to the allerage, have at least 70% reactivity with lymphocytes from patients responding to the allerage, and are not reactive with immunoglobulin E (195) antibodies from patients responsive to the alleragen. The agent can be used to prevent and treat a vide variety of allerage. The agent can be used to prevent and treat a vide variety of allerage and seases. e.g. by describitation. Side effects, e.g. those mediated by 19E, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                sugi-pollinosis
Claim 7; Page 18: 21pp: Japan.
W80339-58 represent epitopes. T cells, derived from the sugi alleraen procesins Cryyl (W80339-44, W80340-44, W80340-44, W80350-58) and W80356-58) and Cryyl (W80354-55). The peptides are useful for the treatment of sugi-pollinosis, an allergic resction of the body to pollen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

24-MAR-1998 (first entry)
Multi-epitope peptide used as imminotherapeutic agent #1.
Multi-epitope peptide; immunotherapeutic agent; ellergic disease;
T-cell epitope region; allergen: lymphocyte; immunoglobatin E.
                                                            for T cells.

The peptides ability to inhibit the cross-linking of an allergen, to an IgE antibody can be used in the prevention and treatment of allergic diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                 New Japanese cedar polien aliergen polypeptide - and DNA coding for useful for treatment and diagnosis of cedar polien allergy claim 5; Page 26-28; 41pp; English. The gene encoding an allergen of Japanese cedar pollen was isolated by PCR amplification using primers based on portions of the allergen protein. The gene was used for recombinant allergen production in E. coli (vector plasmid pKR-223-3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                induced histamine release; antiallergic pertide:

allergen-specific Treels, but not allergen-specific IgE antibodies.
I used for treating cedar pollinosis
claim 5 Page 29/30; 86pp; English
Synthetic peptides based on portions of cedar pollen allergens A
(R81566) and 5 (R81587) were tested for their ability to activate
cedar allergen-specific Treels, but not allergen-specific IgE
antibodies. 6 Peptides (R81589-88158) were identified as Treel
cedar allergen-specific and homologous peptides (R81588-96) can
be used as immunotherapeutic agents to treat or prevent cedar
C pollingsis, avoiding side-effects such as anaphytaxis.
Sequence 5:4 AA.

                                                                                                                                                                                                                                                           Allegenic (.y.) II protein and iraquents from Japanese cedar pollon - used to diagnose, treat and prevent Japanese cedar pollinosis.
Claim 2: Fig 4: 69pp: English.
The sequence is of a Japanese cedar pollen allegen Cry j
II. The protein and its fragments can be used for diagnosis and irearcent of Japanese cedar pollinosis and treatment of Japanese cedar pollinosis and to identify similar sequences in other plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cedar pollen allergen A. Claim 3: Page 27: 36pp. Enqlish.
Synthetic poptides based on portions or cedar police alteraces A (R8159) and B (R81587) were tested for their ability to antivate cedar altergen-specific T-cells, but not altergen-specific 19E antibodies. These peptides (R81890-R8155) were televillified as T-cell for T-cell recognition, and lomologous peptides (R81899-95; can be used as Immunotherapoutic anoths to treat or provent, redured an used as Immunotherapoutic anoths to treat or provent, redured an activation of the televillinosis, avoiding side-effers such as anaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-MAY-1996 (first entry)
Cedar pollen allergen peptide 22 (horologue).
Cedar: Cryptomeria japonica; pollen: allergen: inminoglobilin E:
Ige: T-cell epitope: antibody; pollinosis; therapy; immunotherapy.
                                                                                                                                                                                                                                           24-MXY-1996 (first entry)
Cedar polien aliergen peptide 5.
Cedar Cryptomeria japonica: pollen; allergen; immunoglobulin E

Peptide allerand derived from Japanese cedar pollen - causes I cell
response specific to redar pollen, for treatment of pollenosis
Claim 29. Page 20: 21pp: Japanese.
The present sequence is one of 24 claimed peptides which were
synthesised based on Japanese cedar pollen sequences. This peptide
was shown to have Japanese cedar pollen antigen I cell epitope
activity by using I cells isolated from a cedar pollinosis patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
that contain 1 or more amino acid substitution(s) ran be used as immunotherapeutic agents to treat or prevent celar pollinosis, avoiding side-effects such as anaphylaxis. Sequence 17 AA:

Patent No. 592888
GENERAL INFORMATION
GENERAL INFORMATION: Michael A.
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR SENSITIVE
TITLE OF INVENTION: AND RAPID, FUNCTIONAL IDENTIFICATION OF GENOMIC
TITLE OF INVENTION: POLYNUCLEOTIDES AND SECONDARY SCREENING CAPABILITIES
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

GENERAL INFORMATION:
APPLICANT: Botstein, David
APPLICANT: Balzkili, Timothy
TITLE OF INVENTION: Wethods for modifying DNA and for
TITLE OF INVENTION: Methods for modifying DNA and for
TITLE OF INVENTION: encoded modified polypeptides with target substrates.
NUMBER OF SEQUENCES: 86
CORRESPONDENCE ADDRESS:
ADDRESSE: Richard F. Irecartin
STREET: 4 Embarcadero Center, Suite 3400
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..
